

PlayGround

UNC paths will auto-format to links: (\\dc01\syse)
unless we tell it not to using nowiki tags:
\\dc01\syse

```
' '<nowiki>\\dc01\syse</nowiki>' '
```

BLUF

Bottom line up front. Follow these steps:

1. Get key steps to remember
2. Put them in ordered list format
3. Float that list in upper right of page

{{section>gb:powershell:exchange#create_session_in_powershell}} resolves to this:

Syntax Reminders

Non-breaking spaces () can be entered using _. This is managed via the entities.local.conf file.

This text¹⁾ needs a reference.

Wrap text in two single-quotes before and after to force "fixed-width font": `fixed-width font`. Fixed width text is easier to copy and paste than variable width fonts. Thus, filenames and other text we're likely to want to select should be entered with the fixed-width font.

Here's a block of VBA code (added via `<code vb></code>`):

```
Public Sub HelloWorld()  
    Debug.Print "Hello, world!"  
End Sub
```

You can show code underneath an item in an ordered list without breaking the ordering by using the double-backslash to embed a newline after the item:

1. Item 1

```
SELECT 'Success!'  
FROM Dummy  --see, we can embed line breaks in the SQL, too
```

2. Item 2

Here are some keyboard keys: `Ctrl` + `C` to copy

This is `some highlighted text`. Some `important text`. Full [Wrap plugin examples](#).

Here's a useful tip that doesn't really flow with the rest of the article. It's automatically indented 5% (by virtue of having a width of 90% and being centered).

There is a hidden comment in the source text for this line. It's added like this:
`<wrap hide>hidden comment</wrap>`

Use the "TODO" wrap block to embed "technical notes" in our product wiki pages:

TECHNICAL NOTES

This is a technical note that most users probably don't care about.
